ROK

ROK:E SERIES SELF CLEANING SALT CHLORINATORS

Noria ROK:E Salt Chlorinators kill bacterial contaminants in pool water by the process of electrolysis. Salt water is passed through the electrolytic plates contained within the cell housing and converted to chlorine. The end result is crystal clear, safe, sparkling water.

ROK:E's produce a continuous level of sanitiser eliminating the traditional problems associated with manual dosing of chlorine. Accurate water balance is paramount to protect the pool surface and equipment and to maintain healthy water.

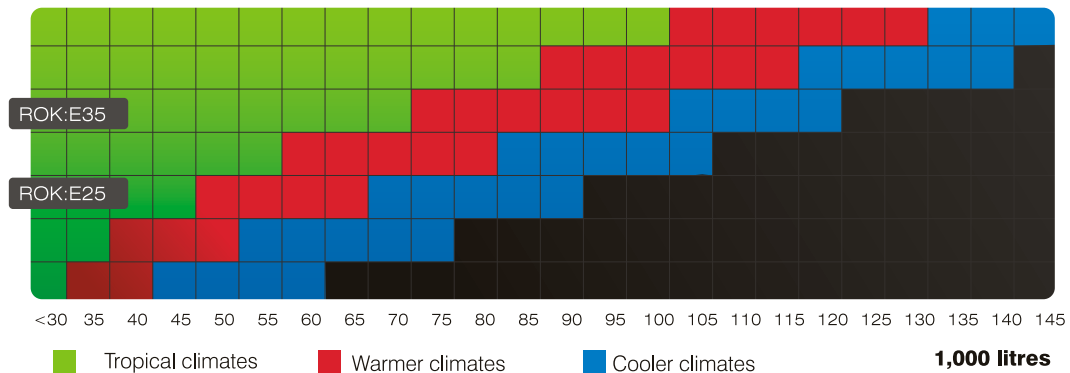

The units allow chlorine output to be easily adjusted to suit demand. Intelligent design allows the ROK:E cells to clean by reversing the polarity of its plates. This process removes build up on the plates to ensure optimum performance and cell life.

The Noria ROK:E Salt Chlorinator is part of a range of intensively researched, high quality, connected Noria products that work in harmony to ensure the pool is easy to maintain and ready for use at any time.

SPECIFICATIONS

Model	Per Hour		Over 8 Hours	
	Chlorine Output	Cal. Hypo. Equivalent (65%)	Chlorine Output	Cal. Hypo. Equivalent (65%)
ROK:E25	25g	38g	200g	304g
ROK:E35	35g	54g	280g	432g

RECOMMENDED SIZING

Always try to oversize by 20-30%. All measurements are based on 8/hr day and balanced chemistry

WARRANTY

The ROK:E Salt Chlorinator by Noria is covered by a 2 year warranty on the cell and power pack against defects in materials and workmanship. The instruction manual that accompanies each ROK:E provides more information. Warranty does not cover commercial use.
